Box of 5 jars (50 beads)... ..\$99.00

Box of 10 jars (100 beads)..... \$179.00

Protect your abutment and screw channels with bacteria and fungi resistant beads.

ImplaSeal™ is a super hydrophobic prophylactic proprietary gel coating formulation. It is a safe and effective homeopathic anti-bacterial and anti-fungal medication with essential oils.

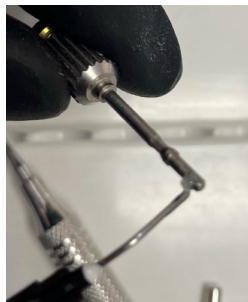

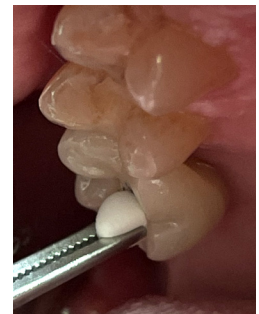

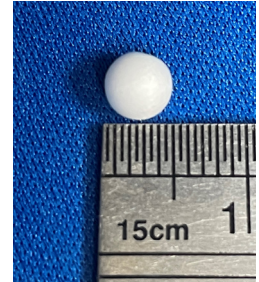

It provides immediate resistance to bacteria and fungi in critically and relevant areas of the abutment and bridge interface. Eliminate the toxins and foul odors that harbor around abutment chambers and screw channels. Helps to prevent bone loss around implants.

Developed by a dentist to be bio-compatible and pH stable. It is safe and effective when used following the clinical guidelines.

ImplaSeal™ is a gel impregnated foam bead 5mm in diameter and is conveniently provided as a two-bead disposable vial. It is used inside the abutment chambers and screw channels of an implant bridge to minimize the detrimental effects of bacterial leakage.

Benefits of ImplaSeal™

- Odorless & tasteless
- Eliminate bacteria and fungi deposits
- Minimize patient complaints
- Solving the bacterial microleakage issue
- Improve and simplify oral breath
- Simplify closing procedures on implant case

2 syringe pack \$79.99

4 syringe pack \$129.99

Protect your implant and abutment interface with a bacteria and fungi resistant gel.

ImplaFlow™ is a super hydrophobic prophylactic proprietary gel coating formulation. It is a safe and effective homeopathic treatment that provides immediate and lasting resistance to bacteria and fungi in those critical and relevant areas of the abutment and implant interface. Use as a prophylactic treatment on the threads of abutment screws before seating into the dental implant body.

Eliminate the toxins and foul odors that harbor around abutment chambers and screw channels. Helps to prevent bone loss around implants. It is supplied in a syringe to be applied to abutment screws before seating onto implants using disposable individual patient syringe tips.

This flowable silicone polymer was developed by a dentist to be bio-compatible and pH stable. It is conveniently supplied as a multi-use application syringe with disposable tips. It is safe and effective when properly used and the clinical guidelines are followed.

Benefits of ImplaFlow™

- Odorless and tasteless
- Improve and simplify oral hygiene habits
- Minimize cervical bone loss
- The bacterial microleakage dilemma is finally solved
- Reduce peri-implantitis
- Eliminate bacteria and fungi deposits
- Eliminate toxins and odors
- Eliminate bone loss around implants
